Key words: Decoration, composition, decoration, design, element, color, effect.

What is decoration? Decorative elements in decorative and design items that have a certain meaning and compositional solution. These elements provide completeness and beautiful harmony of the room. In the ancient Romans, the concept of "decor" had a deeper meaning. In Roman, it means "worthy appearance", "honor and glory".

"Decor" has created its own beauty, which is a way of fitting parts together in a general look.

In the interior, all items, from lamps to paintings, from curtains to vases, should be combined with color and decorations. The main thing is to achieve the interaction of visual means and the environment.

Only then we can create a certain style within one room, set the desired theme and create a composite integral image.

Various materials can be used for decoration, for example: plastic, wood, polyurethane, metal, rubber, fabric, paper, epoxy resin, etc. They differ in style, technique, purpose, interaction with the environment.

Nowadays, they prefer to use natural materials for interior design decorations on walls and ceilings. In order to enrich the interior design decoration of the room, photos on an abstract background and items made using the epoxy resin technique have entered the tradition.

We know that there are several styles in the interior. These styles are distinguished from each other mainly by their decorative elements. Decorative elements help to make the interior interesting, attractive, make the room appear wider or narrower. It would not be wrong to say that it adds beauty to the interior.

Nowadays, among the decorative elements, the technique of epoxy resin has come into vogue. We can use this technique in several ways.

Photo 4. Epoxy resin in interior design.

Epoxy resin is a complex technique. Resin is a 2-component product, which, by adding them, undergoes a chemical reaction and turns into a strong transparent material. It is necessary to work at a high speed from the time of mixing. Because this liquid has the ability to react quickly, it quickly hardens and becomes unusable. It takes 24 hours for the glass to harden. When using this product, the room temperature should be between -19 C and -24 C.

Photo 5. Epoxy resin.

As mentioned below, resin transparent material is mixed with colors so that it can be used in decoration. It is appropriate to use powder paints. Resin is a poisonous substance, and you must remember to wear a mask when using it. It is necessary to leave the room immediately after use.

People with strong smell allergies, pregnant women are prohibited from using tar.

The demand for epoxide is increasing year by year, which in turn is a clear demonstration of the development of the application technique of epoxide resin in the coming years.

Epoxy resin is used in various fields, for example:

- When creating a table top and drawing Abstract (Fluid art) pictures:
